ABSTRACT

The **Intelligent Student Record Search System** is a smart and user-friendly system developed to efficiently store, manage, and retrieve student information. Traditional methods of maintaining student records involve paperwork and manual searching, which can be time-consuming, inefficient, and prone to errors. This system provides a centralized digital platform for managing important student details such as student ID, name, department, course, attendance, marks, and academic performance.

The system enables authorized users such as administrators and faculty members to quickly search and access student records using multiple search criteria. It supports operations such as adding, updating, deleting, viewing, and searching student information while maintaining data accuracy and security. The intelligent search feature reduces the time required to locate specific records and improves the overall efficiency of student data management.

The proposed system minimizes manual work, reduces paperwork, improves record accuracy, and provides faster access to academic information. It can also be enhanced with **database management, data analytics, and artificial intelligence** to provide advanced search capabilities and meaningful insights into student performance. Overall, the Intelligent Student Record Search System offers a reliable, secure, and efficient solution for modern educational institutions.
